DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on October 14, 2008 has been entered.

Claim Objections

2. Claim 2 is objected to because of the following informalities: the “generally” before opening and protrusion should be removed. Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

4. Claims 1-22 are rejected under 35 U.S.C. 102(b) as being anticipated by Walter et al (US 6,024,509).

Walter et al discloses a shifter base housing, shift rod and operator cable assembly, said assembly comprising: an operator cable (14, 15) having an outer case (15) containing a movable wire core (14); a shifter base housing (111) defining an interior space (see Fig 5); an opening (23) in extending through a wall of said shifter

base housing (111) of and into an said interior space; a sleeve (26) having one end extending into said generally opening, said sleeve having said operator cable (14, 15) secured within an other end of said sleeve (see Fig 5); an elastomeric isolator-seal (33) substantially enclosing said one end of said sleeve, said isolator-seal received in said opening and compressed against one or more surfaces defined therein to seal said sleeve one end to said shifter base housing (see Fig 5); said operator cable outer case secured within said protruding other end of said sleeve (see Fig 5), said core wire (14) extending completely through said sleeve (26) and a shift rod (18) extending across said interior space and attached at one end to said cable core wire (14), said shift rod completely underlain by said shifter base housing (see Fig 5) wherein said opening is formed in a protrusion (42) integrally formed on said shifter base housing (see Fig 5), and said isolator-seal is held in said opening by a cap (37) held on an end of said protrusion (see Fig 5), snap fit features (35).
